Annual AHERA Notice For School Year 2017 - 2018

Dear Parents, Teachers, Building Occupants, and Employees:

In the past, asbestos was used extensively in building materials because of its insulating, sound absorbing, and fire retarding capabilities. Virtually any building constructed before the late 1970's contain some asbestos. Intact and undisturbed asbestos materials generally do not pose a health risk. Asbestos material however can become hazardous when, due to damage or deterioration over time, they release fibers. If these fibers are inhaled, they can lead to health problems, such as cancer and asbestosis.

In 1986, Congress passed the Asbestos Hazard Emergency Response Act (AHERA) which requires schools to be inspecting to identify and asbestos containing building materials. Suspected asbestos-containing building materials were located, sampled (or assumed) and rated according to condition and potential hazard.

Every three years the Park Ridge School District has conducted a reinspection to determine whether the conditions of the known or assumed asbestos containing building materials (ACBM) has changed and to make recommendations on managing or removing the ACBM. The Park Ridge Board of Education has contracted Karl & Associates, Environmental & Occupational Health Consultants to provide the District with these inspections. During the district's last inspection, March 2017, all materials listed in the Management Plan as asbestos containing (or assumed to be asbestos-containing) were inspected and appropriate response actions recommended.

The law further requires an asbestos management plan to be in place by July 1989. The Park Ridge School District developed a plan, as required, which has been continually updated. The plan has several ongoing requirements: Publish a notification on management plan availability and the status of asbestos activities; educate and train its employees about asbestos and how to deal with it; notify short-term or temporary workers on the locations of the asbestos containing building materials; post warning labels in routine maintenance areas where asbestos was previously identified or assumed; follow set plans and procedures designed to minimize the disturbance of asbestos contained building materials; and survey the condition of these materials every six months to assure that they remain in good condition.

It is the intention of the Park Ridge School District to comply with all federal and state regulations controlling asbestos and to take whatever steps are necessary to ensure students and employees a health and safe environment in which to learn and work. You are welcome to review a copy of the asbestos management plan in the administrative office of the school during regular business hours.
